

Gaithersburg Medical Center

As part of the Kaiser Permanente Mid-Atlantic Region Strategic Plan, several “Specialty Hubs” are being developed in order to provide enhanced care to Kaiser Permanente members. A “Hub” is a full service medical office building, with the capability to provide comprehensive outpatient services for more complex conditions. The Hub will contain the following services to achieve these goals:

- *Full range of primary and specialty care departments*
- *Oncology and Infusion services able to treat patients on an outpatient basis*
- *Minor Injury and Urgent Care facilities*
- *Clinical Decision Units to provide outpatient observation services to the urgent care clinic*
- *Ambulatory Surgery Centers able to perform outpatient operations*
- *Outpatient procedure suites able to offer complex diagnostic and therapeutic interventions.*
- *Full radiology capability, including CT, MRI and interventional radiology*

The Gaithersburg Project located at 655 Watkins Mill Road, Gaithersburg, Maryland consists of an interior fit-out of an existing six story, 200,000 sq ft core and shell structure constructed in 2007 (LEED Silver Certified) into a medical office building. Minor renovations to selected areas include roof, service areas, loading dock, areas where the new entry canopies are required, improvements to the mechanical and electrical infrastructure, and miscellaneous site improvements to support new site circulation patterns and utility locations. The opening is scheduled for early July 2012.

Diversity Participation
